

THE PERFORATING PRESS

Volume 2

Quality Perforating, Inc.

Issue 4

Be the first one to quote!
Receive a quick budgetary price and
meet your quote deadline.

At QPI, we take pride in getting our customers fast and competitive quote responses. When inquiring, please include the material type and thickness, part size, quantity, and any un-perforated margins around the part or blank areas in the center of the part. All these variables are required for quoting and will factor into the pricing of the part. When we are supplied with this information, we can typically have you a number in less than half a day.

If the material type is hot rolled or cold rolled steel, 3003 or 5052 aluminum, 304 or 316 stainless or G60 or G90 galvanized, QPI either has it in stock or on consignment and can quote you quickly. Exotics can sometimes be challenging from a price and availability standpoint and may take us several days to secure. Exotics include but are not limited to Corten, 5005, 6061 or 7075 aluminums, Monel, Hastalloy and Titanium. QPI also perforates non-metallic materials but does not stock them.

Also, bear in mind that with equipment in house that is unique to the industry QPI can supply you with a more finished part than any of our competitors. So whenever possible, supply us with a drawing and we will take it as far as we can to reduce your lead times and add value to your parts. If the quote is architectural in scope, a take-off for the perforated requirements is necessary for a quick response.

What are you waiting for!
