

# THE PERFORATING PRESS

Volume 2

Quality Perforating, Inc.

Issue 2

For our clients that have a shear to length line, QPI has proven to save them money.

Did you know that Quality Perforating Inc (QPI) can provide perforated material coil to coil as well as slit to width. If your company has a shear to length line then QPI can save you a lot of money by simply processing the material from one coil to another and eliminate any secondary operations such as leveling or shearing, keeping the value added in your shop.

QPI has a newly re-built slitter on our floor which is capable of taking a master coil 16ga and lighter and slitting it to your required finished width. This can be supplied with or without margins and can hold .005" tolerance on the slit dimension.

Just imagine the savings in material costs by running multiple widths from a master coil instead of paying a premium to the material vendor for pre-slit.

So whether you are into roof decking, HVAC, lighting, filters, automotive or any other type of manufacturing that requires slit width perforated coils, call QPI for a professional estimate at 1-800-872-7373. Our friendly and knowledgeable customer service department will be happy to assist you.

Thank you for all your support!
