Processing over-sized sheets

QPI reviews every order and its specifications. We take into account the size of the “sheet”, the pattern/design, the ratio of holes to space between each, press cycle, the type of material and thickness. All of these and more are elements of the equation that are considered as we respond to the job requirements of our customers.

We have successfully produced perforated sheets up to 76" wide and greater than 200" long. These dimensions are bigger than our competition is willing to attempt. In addition to producing these over- sized sheets and the manufacturing challenges, QPI also coordinated the shipping.
(please see image below, 60"x204" on board, ready for delivery)

We provide this shipping service to insure the quality of the job and the integrity of our product is maintained from the specification review through delivery to the job site. Please click on ["Quality Care Given to every Shipment"](#) for more info.

Please consult with your customer service representative. We look forward to reviewing your job specifications, material thickness, perforated pattern and additional requirements.

Thank you for your support over the years.
