

THE PERFORATING PRESS

Volume 4

Quality Perforating, Inc.

Issue 4

“We do not have any runs in our nylons!”

At QPI we hear this all day long!
(click on image for additional info)

A few cycles ago we presented our De Burr capabilities. We have seen an up-tick in the number of customers asking for this requirement, so we wanted to remind everyone that QPI continues to offer “value added capabilities”, under one roof for quick turn around.

As part of our quality control process, we rub a set of nylons over the perforated sheet without creating a run in the stockings and provide a Burr free surface. De burring and edge rounding in one pass has proven to save time and money for our customers.

We are able to set the tolerances on our De burring process, so we can provide a Burr free surface.

Increasingly “Ready for Finish” applications require the removal of burrs, QPI can eliminate them in all metals, 48 inches wide up to .375 thick including aluminum.

99.4% of our customers say they'll buy from us again. We have helped them address their demanding project requirements, improve on-time delivery, and reduce material handling costs.

What can QPI do to help you achieve a competitive advantage?

You won't know until you ask!

Thanks for your support,

We look forward to talking with you soon.
