Issue 8

***“Okay we are ready to leave;  
I do not have any runs in my nylons!”***

How many times have we heard this?

Well we feel the same way about our De burring procedure. This additional quality control process has proven to save time and money for our customers.

We are able to set the tolerances on our De burring process, so we can rub a set of nylons over the perforated sheet without creating a run in the stockings and provide a Burr free surface. If your applications require the removal of burrs, QPI can eliminate them in all metals, including aluminum. Yes including aluminum.

The De burring method has proven to be cost effective and beneficial to our clients. This is an additional example of our commitment to offering “added value capabilities”, with one point of contact to ensure quality.

99.4% of our customers say they’ll buy from us again. We have helped them address their demanding project requirements, improve on-time delivery, and reduce material handling costs.

What can QPI do for You? You won’t know until you ask!
